CONTACT NUMBER +91 99204 31714

> CITIZENSHIP Indian

DATE OF BIRTH 25th of November, 1999

PERMANENT ADDRESS (INDIAN) M – 803 Bakeri Swara

Near ABB Campus

Makarpura Maneja Road

Maneja, Vadodara 390013, India

RESEARCH EXPERIENCE

Collaborator, (July 2020 - Present) Position

SUPERVISOR Dr. Horacio de la Iglesia,

Dept. of Biology, University of Washington, Seattle.

AREA OF RESEARCH Digital Rhythms Project, Rhythms in human behaviour, Sleep and Work

Position Visiting Student, (Dec 2019)

Dr. Sheeba Vasu SUPERVISOR

Behaviour and Neurogenetics lab, JNCASR, Bangalore, India

AREA OF RESEARCH Circadian Rhythms in Glutathione and Peroxide levels in Drosophila

> Pacemaker Neurons. The interplay of redox states and neuron function (project proposed for Jan 2021 to June 2021, slated due to COVID-19)

Position

Student Researcher, (May 2019 – Present)

SUPERVISOR Dr. S. Sahabudeen

Dept. of Biotechnology, SBE, SRM IST, Chennai, India

AREA OF RESEARCH

- 1. Effect of choices of Individuals made on outcomes of collectives
- 2. Drosophila awareness of self in collective locomotion
- 3. Bisphenol-A exposed *Drosophila melanogaster* is a poor model for neurodevelopmental diseases

EDUCATION

Presently Pursued Degree Bachelor's in Technology, Biotechnlogy (2017 – 2021), (78.12%)

SRM Instititute of Science and Technology Institution

Sr. Secondary School All India Senior School Certificate Examination (2017)(77%) SECONDARY SCHOOL All India Secondary School Examination (CBSE) (2015)(9.6 CGPA)

> Institution R. N. Podar School, Affiliated to CBSE, Mumbai, India

SUMMER SCHOOLS MAY - AUGUST 2020 HIGHLIGHTS Adde my own tool to study Android App timestamps Joined the Digital Rhythms Project, with the de la Iglesia lab Made tutorial notebooks to aid teaching neurobehaviour experiments NeuroMatchAcademy 2020, Interactive Student Worked with Dr. Steinzmetz's Neuropixel data from 2AFC task "Why do task engaged mice still fail sometimes?" CONFERENCES ATTENDED January 2020 POSTER PRESENTED January 2020 POSTER PRESENTED Gongrehensive study on the Bisphenol-A induced Drosophila model for Autism Spectrum Disorders with co-treatment by Cerium oxide Nanoparticles and U0126 MAP Kinase inhibitor: genotoxicity, oxidative stress, apoptosis and behavioural irregularities." FEBRUARY 2019 POSTER PRESENTED (ONLINE) OCTOBER 2020 (ONLINE) JULY 2020 (ONLINE) MARCH 2020 (ONLINE) MARCH 2020 ONLINE) MARCH 2020 ONGOING PROJECTS WITH DE LA IGLESIA LAB, UW The DE LA IGLESIA LAB, UW Digital Rhythms Project — Data Collection Stage and Analysis stage https://delaiglesialab.github.io/DigitalRhythmsProject/ 2. Tutorial notebooks — Made Available, Publication post feedback https://invisilico.github.io/Tutorial-Notebooks/ WITH DR. S. SAHABUDEEN, SRMIST BY SELF BY SELF CONSERVED BY SELF Longserved bee waggle-dance circuits in Drosophila melanogaster is a poor model for Neurodevelopmental disorders — Publication stage, biorxiv soon 2. A 2 — cluster mixing paradigm to study social decisions (In files) To study what makes them stoy or desert groups BY SELF Conserved bee waggle-dance circuits in Drosophila melanogaster Analysing the Janelia fly hemibrain EM data to model connections between pacemaker neurons and central complex/EPG neurons To understand how the clock guides heading direction in files

		To understand how the clock guides heading direction in flies

COMPUTER SKILLS	
Programming Languages	Python3/2.7 (preferred), MATLAB and R
	I prefer using Linux (Pop!_OS) to ensure fully open source projects. I believe in full Data and Code sharing in publications. I have attended the Neurodata Without Borders (NWB) orientation
	User-developer of TOPAS-MC and nBio, A Monte-Carlo Simulation toolkit for biological molecules based on Geant4 Particle data.
Online Courses	
COMPUTATIONAL NEUROSCIENCE	Computational Neuroscience – University of Washington, Seattle, Coursera
Neuroscience	Medical Neuroscience – Duke University, Coursera Visual Perception and the Brain – Duke University, Coursersa
CHRONOBIOLOGY	Circaidan Rhythms: How Rhythms Structure Life – LMU Munich, Coursera
Systems Biology	Systems Biology and Biotechnology(5part+project) – Icahn centre, Coursera
PYTHON, GITHUB, JUPYTER	Applied Plotting, Charting & Data Representation in Python - UM, Coursera Introduction to Data Science in Python – University of Michigan, Coursera Google IT Automation with Python (5 part+project) – Google, Coursera
MATLAB	Introduction to Programming in MATLAB – Vanderbilt Univesity, Coursera Practical Data Science with MATLAB – Mathworks, Coursera
STATISTICS AND EXPERIMENTAL DESIGN	Statistics with R (5 part + Project) – Duke University, Coursera Bayesian Statistics: From concept to data analysis - UC Santa cruz, Coursera Experimentation for Improvement – McMaster University, Coursera
GAME THEORY	Welcome to Game Theory – University of Tokyo, Coursera Game Theory with Python – Coursera Project Network, Coursera
THEORY OF COMPUTATION	Computer Science: Algorithms, Theory and Machines - Princeton, Coursera
DEEP LEARNING	Deep Learning Specialisation (5 part) – deeplearning.ai, Coursera
COMPUTER VISION	AWS computer vision: Getting started with GluonCV - AWS, Coursera Computer Vision Basics – SUNY, UB, Coursera
COMMUNICATION SKILLS	
Languages	English (Most used and proficient in, All formal education in English) Hindi, Bengali (Fluency in speech, some reading and writing)

RESEARCH INTERESTS

AND

CAREER STATEMENT

NEUROSCIENCE ASSOCIATED:

BEHAVIOURAL NEUROSCIENCE
MECHANISTIC NEUROSCIENCE
COMPUTATIONAL NEUROSCIENCE
SYSTEMS NEUROSCIENCE

I am interested in exploring how cognitive processes that drive complex behaviours are performed by clusters of highly specialized cells which we call neurons. In my opinion, apart from understanding their cellular mechanisms of computation and a systemic understanding of function, It is important to understand the evolutionary context that led to their current state.

EVOLUTIONARY AND
DEVELOPMENTAL NEUROSCIENCE
CELLULAR AND MOLECULAR
NEUROSCIENCE

To that end, I believe chronobiology, the study of biological timekeeping mechanisms, which itself is a product of the limitations of biological processes and the evolutionary history of organisms, may be the perspective that allows us to gain a reasonable insights.

INVERTEBRATE NEUROSCIENCE

During the course of grduate school, I would like to study how pacemaker cells communicate with the circuits that perform cognitive processes and play a role in their modulation. Specifically, in the case of celestial navigation and heading direction/motion, how they may encode the information of external time to guide the fly in the right direction using external time cues.

OTHER MARKED INTERESTS:

CHRONOBIOLOGY
SOCIAL CLUSTERS
COLLECTIVE BEHAVIOUR
EVOLUTION AND ECOLOGY

I find the fruitfly to be the perfect model to start with, given my experience with them and the level of manipulation possible, but in the future, would like to continue exploring the other ways life has found of performing analogous functions, in different organisms, and would like to pick necessary skills up early during graduate school.
